Autonomous WhatsApp gateway

Instant WhatsApp alerts, without the per-message tax.

A high-speed notification gateway built for service businesses. Send booking confirmations, technician updates, and invoices straight to a customer's WhatsApp — no per-message fees, no template rejections, no aggregator markup.

₹0	3,000	<1s	24h
Per-message fee flat monthly cost	Alerts per month ~100 per day	Dispatch latency direct WebSocket	Turnkey launch no Meta review delay

Architecture **Dedicated multi-device v7** | Queue protocol **FIFO, 2–5s jitter** | Integration **Universal REST API** | Provider **Whatsy Technologies**

— Executive summary

Why fast-growing service businesses choose Whatsy

Legacy communication vendors charge for every notification you send. Whatsy replaces metered per-message billing with an autonomous, private gateway that integrates into your software in under fifteen minutes.

Instant, dynamic messaging

No waiting 24–48 hours for template approvals. Send dynamic invoices, technician names, and addresses freely, with no rejection risk.

Human-paced smart queue

Built-in 2–5 second jitter eliminates blast detection. Messages are paced naturally, keeping the account safe and flag-free.

95% lower cost

Eliminate ₹3,500-plus monthly aggregator bills. Whatsy includes 3,000 messages a month with the first 6 months free, then just ₹299/month with zero markup.

Competitive benchmark

How Whatsy compares with legacy aggregators

Twilio and Gupshup were built for multi-million-dollar marketing budgets and rigid template constraints. Here is how Whatsy compares for day-to-day operational alerts:

Capability	Twilio WhatsApp API	Gupshup / Interakt	Whatsy gateway Recommended
Cost at 3,000 alerts/mo	₹3,200 – ₹3,800/mo, metered	₹2,800 – ₹4,200/mo	**6 Months Free, then ₹299/mo flat**
Setup & go-live time	2–4 weeks, Meta verification	1–3 weeks	**Under 24 hours, turnkey**
Template approvals	Mandatory for every message format	Mandatory Meta approval	**None — fully dynamic**
Per-message markup	₹0.60 – ₹0.85 per notification	₹0.55 – ₹0.75 per notification	**₹0.00**
Developer code required	50–100 lines, complex webhooks	40–60 lines	**5 lines, standard REST**
Data & privacy isolation	Shared multi-tenant database	Shared multi-tenant database	**Private cloud, SQLite WAL**
Anti-spam pacing	Immediate burst, higher flag risk	Immediate burst	**2–5s random jitter queue**

The hidden tax of legacy aggregators

Sending 3,000 order alerts, appointment reminders, or receipts a month on Twilio or Wati means paying a base subscription fee **plus** a variable charge on every single message. With Whatsy, you get your **first 6 months free**, and ongoing costs are capped at just **₹299 a month** regardless of volume within your tier.

— Engineered for reliability

Enterprise features included with Whatsy

Smart FIFO message queue

Randomized 2,000–5,000ms delay between dispatches. No simultaneous bursts, for maximum delivery rates.

Autonomous auto-reconnect

Connections recover automatically with exponential backoff after a network drop. No manual restarts.

Live admin portal

Web console with session health, queue volume, API key provisioning, and delivery logs in real time.

Dedicated data ownership

High-speed SQLite with write-ahead logging. Message records stay isolated on your private server.

Sub-second API response

Endpoint acknowledges requests in under 100ms, queuing delivery asynchronously without blocking your app.

Seamless scale path

If volume grows past 10,000 messages a month, turnkey migration to the Meta Cloud API is supported.

— Transparent pricing

Predictable investment, measurable return

Turnkey setup & deployment

₹9,999

One-time · complete setup · includes 6 months free

- First 6 months operational tier included FREE
- Full server provisioning & cloud setup
- WhatsApp Business phone pairing
- Ready-to-use API integration snippets
- 30 days of priority technical support

First 6 Months Free

Whatsy operational tier

₹299

Per month (First 6 Months FREE) · 3,000 alerts included

- First 6 months 100% free with turnkey setup
- Up to 3,000 alerts a month, ~100/day
- Zero per-message transaction fees
- Full admin UI & API key access
- Cancel or scale any time, no lock-in

Notification provider	Setup / dev cost	Monthly, 3,000 msgs	Year 1 total cost
Twilio WhatsApp API	₹20,000+ dev cost	~₹3,200/mo	~₹58,400+
Gupshup / Interakt	₹15,000+ dev cost	~₹3,000/mo	~₹51,000+
Wati standard platform	₹0 setup	₹3,499/mo	~₹41,988
Whatsy gateway	₹9,999 (turnkey)	6 Mos Free, then ₹299/mo	₹11,793
Your first-year net savings with Whatsy			₹30,000 – ₹46,600+

— Effortless rollout

From decision to live in 24 hours

No paperwork, no protracted carrier review. Whatsy deploys on dedicated cloud infrastructure and pairs with your number in minutes:

01

Cloud setup

Deploy Whatsy on a high-availability server. Pair your business SIM in seconds with an 8-character code.

02

Five-line API hook

Connect your app to Whatsy with five lines of code. Snippets provided for Node.js, PHP, and Python.

03

Safe warm-up

Launch on a managed 7-day ramp-up — 20 alerts a day rising smoothly to 100 — to build sender trust.

04

Fully autonomous

Whatsy runs continuously, delivering booking confirmations and technician alerts around the clock.

— Developer simplicity

One universal REST endpoint

cURL example

```
curl -X POST https://your-domain.com/api/v1/messages \
  -H "X-Api-Key: your_project_api_key" \
  -H "Content-Type: application/json" \
  -d '{
    "recipient": "+919876543210",
    "message": "Hi Rahul! Your AC service is confirmed for 3:00 PM today. Technician: Amit (+919812345678)."
  }'
```

Ready to upgrade your notifications?

Stop paying a per-message penalty. Deploy Whatsy today with 6 months free and save ₹30,000 to ₹46,000+ in your first year.
